

ABSTRACT

The invention relates to methods for transcoding a webpage and creating a personal profile. The method for transcoding a webpage comprises the steps of: (i) retrieving a specific webpage; (ii) analyzing the specific webpage; (iii) dividing the specific webpage into at least two groups; (iv) transcoding the at least two groups from a first language into a second language according to a predetermined parameter; and (v) outputting the transcoded groups to a mobile device. The method for creating a personal profile comprises the steps of: inputting a Chinese or English URL address through a computer or a mobile device; (ii) retrieving a corresponding webpage through a reformatter and disabling the double clicking function; (iii) selecting contents in the webpage to be displayed; and (iv) assigning a name to the selected contents and storing the selected contents and the name. According to the methods of the present invention, a user can easily access the Internet based on his own requirements through a mobile device.
